Zimbabwe entered the International floriculture industry in the mid 1980's and to date there are approximately 200 growers in the country who produce more than 40 different kinds of flowers for the export market. The flowers are grown under shade, under cover, under lights or in the open depending on the variety. They require careful cultivation and skilful harvesting as factors such as the crop ripeness, correct stem length and correct colour vitally affect their market value. After picking, the different varieties are packed in boxes prior to export by air. Most of Zimbabwe's flowers are sold by auction in Amsterdam prior to distribution to many countries in Europe. Flowers are also sold in the UK, the Middle East, the RSA, and Australia. On average a bloom picked in Zimbabwe on one day will be in the retail flower stalls in Europe two days later. The export flower market is one of the fastest growing sectors of Zimbabwe Agriculture. In 1990 2438 tonnes were exported, earning the country nearly Z$25 500000. In 1994 it is predicted that 6400 tons will be exported, earning the country an estimated Z$96 900 000.

**35c - Strelitzia**

These exotic plants require very careful cultivation and are difficult to grow commercially. The blooms are unique with unusually shaped petals of deep blue and orange. This remarkable colour combination and their large size makes them much sought after for formal floral arrangements by florists all over the world.

**80c - Proteas**

Proteas are flowering shrubs which have adapted well to Zimbabwe conditions as they enjoy full sun and well-drained acid soils. The blooms are large and heavy, which makes air freight expensive, but the exotic flowers last well and are also popular in dried arrangements, making them a viable commercial crop.
$1.15 - Phlox
At present only a small hectarage of this delightful little flower is grown in Zimbabwe as the crop is still in its experimental stage. The blooms are available in a variety of colours with mauves, blues, and pinks being the most predominate. The profuse clusters of star-shaped flowers are popular as 'fillers' in less formal flower arrangements.

$1.75 - Chrysanthemums
Chrysanthemums have been cultivated in Zimbabwe for many years. They are exported mainly to the UK and Australia. Many varieties are available, from large single blooms to delicate clusters and sprays which are useful as 'fillers' in floral arrangements. Colours include the ever popular white blooms as well as a large array of pinks, yellows, oranges, reds and mauves.

$1.95 - Lilies
The lily has been cultivated for some 3000 years, but most of the varieties that are popular today have been developed in the last 40 years. At present only a small number of growers in Zimbabwe produce this exotic flower which is cultivated under shade from bulbs planted deep in rich well-drained acid soils.

$2.30 - Roses
Roses are undoubtedly the most popular flowers in the western world and they account for more than 60% of the floricultural exports of Zimbabwe where nearly 50 varieties in just about as many colours are produced by an increasing number of growers.

First Day Cover

The cover numbering comes from the catalogue produced by Geoff Brakspear.

A pictorial first day of issue canceller was produced for this issued and was used by the Philatelic Bureau. Other first day cover cancellers continued to be used at main post offices.
